

Perfectly safe for you and your family, Nova's Gas water heaters are also cost effective; carefully designed to save a lot on gas and water consumption.

Domestic Gas Water Heater

Nova's gas water heater is a cost-effective and energy saving home product that provides you with absolute safety and full control for your different needs!

Product Features:

Design:

The gas water heater is made of high quality components equipped with a digital water temperature indicator and manual control units. It can be operated by gas or natural gas

Efficiency:

- Full control over water and gas flow is provided.
- The ability to switch between winter and summer systems enables you to adjust water temperature while saving energy.
- Self-igniting, the heater works automatically once you open the water tap and the flame shuts down automatically upon closure.
- If the water pressure is high, or even very low, the heater's efficiency remains accountable.

Safety Measures:

- The heater's flame is hard to be put out by wind and thus maintains its efficiency when installed in a home balcony. The heater is also gas leak resistant, and thus it's totally safe to have it installed inside the kitchen or bathroom.
- For heaters of 10 liters capacity, the model is equipped with a chimney to release carbon dioxide outside. In all cases, a safety device is installed to turn off the heater completely if carbon releases exceed safety limits.
- If for any reason the flames were put off, the gas flow stops automatically and the heater shuts down completely.
- If your kid leaves the hot water tap open or you simply forget to close it; the heater will only operate for 20 minutes then shut down automatically. Simply close the tap and open it again to turn the heater back on!

- With the ability to control water and gas flow, you'll find water temperature always suitable for the amount of water being used; never getting too hot.

Energy Saving:

- Water flow and temperature are easily adjusted using two different valves; which gives full control on the amount of water and gas consumed. Increase water and gas flow before your shower time to enjoy, then reduce controls again and save energy during your regular use of the water tap!
- Equipped with a burner controller, the heater can be set to winter or summer systems; saving gas in summer when you don't need very hot water.

Maintenance:

With a warranty of 36 months, this heater also comes with a complete installation and maintenance manual, and spare parts are always available at Nova.

Product Specifications:

- **Outer Casing:** High Quality Steel
- **Temperature Indicator:** Digital
- **Controls:** Gas Flow, Water Flow, Winter/Summer systems
- **Ignition Batteries:** 2 batteries size (D) 1.5 volts
- **Minimum Water Pressure:** 0.3 bar
- **Warranty:** 36 Months
- **Spare Parts:** Always Available
